

# Call for Papers

The *Industrial and Systems Engineering Review* is an open-access online journal aimed at advancing industrial and systems engineering theory and practice as applied to any enterprise system.

The journal editors are delighted to announce that ISER is now part of the West Point Press (WPP), the publishing arm of the United States Military Academy at West Point. The WPP embodies and advances the Academy's mission and core values by publishing practical knowledge for students, scholars, and leaders around the world.

This call for papers will support our inaugural issue under the WPP. ISER seeks the following types of contributions:

- **Full-length research articles** (15-page limit): a discussion and presentation of well-developed research ideas; ISER is especially interested in undergraduate research efforts for full-length research articles.
- **Research notes** (5-page limit): powerful summaries of a promising research effort; preference will be given to researchers with novel ideas with strong promise for future publications in peer-reviewed journals.
- **Professional commentaries** (10-page limit) – ISER seeks experienced professionals willing to share their valuable experiences and perspective on a unique aspect of industrial and systems engineering. This is not a research article – this is a forum to share wisdom and knowledge.
- **Literature reviews** (30-page limit) – ISER seeks survey papers that organize and synthesize important published literature related to a compelling ISE topic.
